

How to use the custom field pictures and custom logo pictures-

1. Once the field and/or logo pictures (.jpg files) are unzipped (if necessary) copy all of them into the following folder:

C:\Program Files\Action PC Football 2007\TeamLogos

2. Open Action PC Football. Under the Organize menu select Team Logos.

3. For each team assign their fields by selecting them under Horizontal Field-Dry Field, Horizontal Field-Rain Field and Horizontal Field-Snow Field. After highlighting the desired picture click on use field.

4. You do not need to select anything under the sections that refer to the end zone logos. Those choices are alternative choices when you do not have these custom fields.

5. Select and assign the logo for each team under the Team Logo window. Click on Use Logo just like you did for the fields.

How to use the custom stadium file-

1. Rename your original FBPARKS to something like FBPARKS1 if you want to. If not you can replace (delete the original FBPARKS) it when you copy the custom FBPARKS.

2. Rename the custom FBPARKS file to FBPARKS if it is not already named FBPARKS. Copy it into the following location:

C:\Program Files\Action PC Football 2007\

3. Open Action PC Football. Under the Organize menu select Team Information.

4. For each team find and assign their stadium by clicking on it.

Hopefully this clears it up. Let me know if you have any more questions.
